

COMPONENTS FOR CONNECTING

Alcohol cleaning wipes (50 units) AF-004

Tight closure

Without water. Do not leak

They are designed specifically for cleaning the fiber end-faces or connectors in order to maximize the performance of light transport. They remove any dust, oil and pollutants leaving no residue on the fiber. Using these towels it is unnecessary to transport liquid alcohol, which can always be dangerous.

A key feature is these towels are 100% free of water; the water is an element to avoid while cleaning optical fiber. Towels come in sealed bags, so they can withstand the test of time until they are used. They leave no lint and contain the exact amount of alcohol: do not leak or expel an excess of steam.

*The alcohol cleaning wipes are available as a separate accessory, being part of the **PL-10 Connecting Kit** or part of the **OP-040 Fusion Extension Kit**, which in a suitcase includes all the most important tools and accessories to make inexpensive fiber connections.*
